

Environmental report of Etimark AG

We attach UTMOST IMPORTANCE to environmental awareness

Environmental issues are of concern to all of us, because every person is interested in an intact environment.

In particular, we focus on the procurement and the handling of our production facilities and materials. Our material suppliers are constantly striving to manufacture their products in a manner that is as environmentally friendly as possible (minimisation of emissions and waste). Most of them are certified according to the quality and environmental management standard ISO 14001.

When manufacturing our products, we pay attention to the effects on the environment. Emissions are avoided or eliminated in the best possible way (among other things, Etimark AG is entered in the VOC positive list of the canton of St. Gallen). All aluminium scrap material is briquetted and recycled. The remaining waste is separated (mainly into PET, paper, cardboard, plastic foil and wood) and is properly recycled or disposed of according to statutory provisions. To save energy, a part of the waste machine heat is fed back into the production premises by means of ventilation system recirculation. In addition, Etimark AG has also made an energy goal agreement with Energie-Agentur der Wirtschaft (EnAW) in 2015. Accordingly, we are obligated to reduce the relative energy consumption by 10% and the CO₂ emissions by 15% by 2020.

A major concern of our company is to maintain an individual responsibility of all employees. Another important point is the generally economical consumption of materials and energy.

Through our understanding and the responsibility towards our environment, we try to adapt to the constantly growing demands of our customers as far as possible.
