

Etigral[®]

The even aluminum lid with restrained embossment

Is our solution for an unrivaled performance of your yogurt.

A high class print layout pretense a nearly total even surface, because of that it is possible to visualize perfectly the optical characteristic and the brilliance of your print layout. Well, for separating sealing lids always need a brace of an embossment. We combine utility with beauty! The totally glazed aluminum lid with restrained embossment is our answer for high requirements about optical characteristic and plasticity-ETIgral[®]-special lid of Etimark.

Etigral® Characteristic

The aluminum lid shows at the curb a restrained embossment, which makes a smooth separation possible. This embossment will be glazed during the sealing process thereby it is nearly invisible. What stays is a totally glazed lid with a brilliant optical characteristic, without any embossment.

Or would you prefer your own in-house embossment? Integrate your typical inhouse embossment and your product becomes non-interchangeable. Or hike the attention on your product with Braille.

Our perfect print quality unfolded all of the effect and glows with an impression which is close to reality.
